

LMRC – NEW CLEANING PROTOCOL COVID-19

Oars

Oar handles should be dipped in bleach/water solution or sprayed with bleach – Oar shafts should be sprayed with bleach/water solution (indoors)

Boats

Step 1:

Boat should be washed with Star Brite Sea Safe Boat Wash (on dock)

This will only clean the surface but not disinfect. Sea Safe Boat Wash is an environmentally-responsible boat cleaning product that really works. The low-sudsing, biodegradable formula is concentrated for maximum cleaning power and maximum economy. It is Lake Safe, so it can be used while the boat is in or near the water.

Simple Green & Dawn are second choice options.

A bucket of cleaning solution can be used through the day, but should be dumped and refilled each day.

NOTE: DO NOT DUMP ANY CLEANING SOLUTION IN THE LAKE

Step 2:

All areas of contact should be wiped with an antibacterial wipe, sprayed with bleach (on paper towel indoors) or sprayed with alcohol or hydrogen peroxide.

Please Note: If you plan to row during this time period you should plan to bring antibacterial wipes/spray/gloves. We have a limited amount of supplies on hand.
